Technical Skills

Languages: Python, Java, Bash, Javascript, SQL, Go
Technologies: Kubernetes, OpenShift, Git, Docker, Node.js, React, MySQL, MongoDB, Django, Scikit, TensorFlow, Apache Kafka
Infrastructure: IBM Cloud (IKS & ROKS), AWS (EC2, ELB, EBS, S3, Route53, CloudWatch), GCP (GAE, Vertex AI), Ansible, Jenkins, IAM
AI & Developer Tools: RAG agents, Machine Learning, Claude, Cursor, ChatGPT, Microsoft Copilot

Experience

IBM Cloud Staff Software Engineer — Jan 2022 - Present

- Architected the backend for a 3D business intelligence platform, earning recognition from IBM's **Academy of Technology**
- Achieved **10x faster** resource tuning by automating CPU and memory profiling for control plane components
- Engineered Kubernetes and OpenShift CI/CD pipeline automation, saving **20+ dev hours per month** in validation time
- Built NLP and clustering pipeline to group related customer tickets, improving triage efficiency by **2x**
- Reduced manual ops time by **24+ hours per month** through extending Grafana and Prometheus observability
- Accelerated verification of control plane components by **5x** via automated error detection scripting
- Performed deep technical investigations and communicated clearly with customers, resolving **150+** support tickets
- Triaged and debugged **300+** Kubernetes and OpenShift end-to-end release test failures in the last 12 months
- Core reviewer of sensitive Kubernetes and OpenShift service codebases, including **300+** pull requests in the last 12 months
- Built and contributed to **24+** Kubernetes and OpenShift service release pipelines, including **180+** open source contributions
- Awarded **Outstanding Technical Achievement** for enabling migration of clusters from OpenShift Toolkit to HyperShift

IBM Cloud Software Engineer Intern — May 2021 - Aug 2021

- Automated cluster analysis to accelerate issue resolution, cutting total ticket response time by **56+ hours per month**

Acuity Insurance Software Engineer Intern — May 2020 - Aug 2020

- Developed a cataloging platform using JavaScript (Dojo), Java, and PostgreSQL, enabling efficient analysis of **300K+ policies**
- Migrated mainframe processes to a Pub/Sub architecture using Apache Kafka, boosting underwriter workflow velocity by **25%**

U.S. Naval Research Laboratory ML Research Intern — May 2019 - Aug 2019

- Developed a StarCraft II reinforcement learning agent in TensorFlow, achieving **15x faster** convergence than baseline models

UW Whitewater Research Assistant — Sep 2018 - Dec 2021

- Published an XAI intentional sequence method for RL agents, producing sequences **364% more informative** than baseline
- Built a CS alumni web app using Java, MySQL, and JSP to visualize statistics for **300+ graduates**
- Presented technical sessions on database systems & AI to **100+ students**, improving practical understanding
- Analyzed **50 Naval maintenance SOP trajectories** using IRL, optimizing plans for time, cost, and manpower

Projects

Fit to Scale Node.js, Express, React, MySQL, MongoDB, Docker, AWS, EC2, S3, Route53, CloudWatch, Stripe API

- Developed a full-stack, multi-tenant SaaS platform enabling **10+ trainers** to market and sell services via subscriptions
- Built a microservice architecture back-end with API, SQL, and document databases, ingesting **3.5+ million log entries per year**

Bitclout Bot Python, MongoDB, Discord.py

- Developed 10+ features, including borrowing/lending protocol, NFT royalties, role manager, sports betting, and casino games
- Created a Bitcoin-inspired cryptocurrency supporting **100K+ transactions across 2,800+ blocks**

Education

M.S. University of Wisconsin - Whitewater (Computer Science | 4.0 GPA)

- **Coursework:** Distributed Systems, Machine Learning, Advanced Database Systems, Advanced Algorithm Design & Analysis

B.S. University of Wisconsin - Whitewater (Computer Science, Economics | 3.97 GPA)
